

## Quick Guide to setup the local displays for Masterclasses 2007

There are mainly 3 kinds of local setups for your session in EVO. One can use 1 PC, 2 PCs (that should be logged with 2 different users) or 1 PC + H.323 device. In this document you will have some quick instructions for these three use cases in how to set the display locally. We are also considering that you have 2 or at least 1 beamer for projection. In case of only one beamer, priority of projection should be given to the Shared Desktop. Please refer to the case that applies to your setup.

### **i) 1 PC setup**

- 1) Log in the PC with your EVO account (please make sure that your account is of easy identification for the moderators/technical personnel)
- 2) Enter Einstein meeting and send your video and audio using the AV tools videoconference client (more info in how to do that please refer to the section AV tools in the link below).  
<http://it-multimedia.web.cern.ch/it-multimedia/tutorials/flash/EVO>
- 3) Click on the widget labeled "Shared Desktop" in Vievo application and you should have it in big size.

### **ii) 2 PCs setup**

- 1) Log in each PC with a different account (please make sure that your account is of easy identification for the moderators/technical personnel)
- 2) In one of the PCs enter Einstein meeting and send your video and audio using the AV tools videoconference client (more info in how to do that please refer to the section AV tools in the link below).  
<http://it-multimedia.web.cern.ch/it-multimedia/tutorials/flash/EVO>
- 3) In the 2<sup>nd</sup> PC do the same as in 2) with a different account and keep your audio muted all the times and display only the "Shared Desktop" window by clicking on it in Vievo application.

### **iii) H323 + PC setup**

- 1) Log in the PC with your EVO account (please make sure that your account is of easy identification for the moderators/technical personnel)
- 2) From the PC connect your H.323 device using it as your videoconference client (more info in how to do this, please refer to the section H.323 in the link below).  
<http://it-multimedia.web.cern.ch/it-multimedia/tutorials/flash/EVO>
- 3) In the H.323 device display output you should see the current speaker. To see all the videos including the "Shared Desktop", in Koala, Einstein meeting, click on the icon  and you get a window of Vievo application with all the videos.
