

18.04.2019

Dear all,

International Masterclasses 2019 have ended this week. We have almost seven weeks behind us with a full packed schedule of 323 Masterclasses - that's a new record! It's wonderful to see more students participating every year and new research institutes offering the program. This definitely helps to inspire the next generation and to attract young researchers to HEP!

MINERvA Masterclasses were held for the first time this year. The announcement met with great interest from the very beginning. There were a total of twelve Masterclasses in which the students could analyze data from MINERvA and from their results draw conclusions on the nuclear radius.

We would like to thank all of you who have contributed to International Masterclasses. Such a huge program can only be successful with the support of many people. Countless researchers in their research institutes have shared their knowledge with high school students and let them participate in the research. Almost 70 moderators at CERN, Fermilab or TRIUMF led the video conferences and answered questions from the student groups. The Vidyo support team and the working group video conference provided essential support. Our big thanks goes to all other unnamed supporters and to funding agencies.

We are looking forward to organizing International Masterclasses again next year and to your participation in IMC20!

Kind regards,  
Uta + Ken
